^{13.} Clinical study on auricular acupoint penetration needling along the skin for treatment of a variety of pain syndrome and dysfunction.

Jia CS, Ma XS, Li XF, Shi J, Li CF, Liu EJ, Zheng LY, Qin L, Xu XK. Hebei Medical University, Shijiazhuang, Hebei 050091, China. jia7158@163.com

Abstract

This paper is a summary of clinical studies on auricular acupoint penetration needling along the skin for treatment of pain and dysfunction in recent 10 years. Auricular acupoint penetration needling along the skin was used to observe rapid analgesic effects and clinical efficacy on cervical spondylopathy, periarthritis of shoulder, pain in waist and lower extremities, migraine, and other peripheral neuropathic pain, and stroke sequels, soft tissue injury, and so on. Self-control method was used in the studies at the first stage, and clinically randomized control trial methodwas used for systematic comparison with other therapies at the second stage. Results indicated that the auricular acupoint penetration needling along the skin had obviously clinical effects on cervical spondylopathy, periarthritis of shoulder, pain in waist and lower extremities, migraine, soft tissue injuries and stroke seguels, with a better rapid analgesic effect as compared with ear perpendicular needling method.

Abstract

Primary chronic headaches cause more disability and necessitate high utilisation of I based on selected populations, while information from the general population is largel stratified cross-sectional epidemiological survey included 30,000 persons aged 30-44 self-reported chronic headache were interviewed by physicians. The International Clas Disorders was used. Of all primary chronic headache sufferers, 80% had consulted the of these 19% had also consulted a neurologist and 4% had been hospitalised. Co-oc the probability of contact with a physician. A high Severity of Dependence Scale scor contact with a physician. Complementary and alternative medicine (CAM) was used I physiotherapy, acupuncture and chiropractic. Contact with a physician increased the Acute headache medications were taken by 87%, while only 3% used prophylactic m majority of those with primary chronic headache, 1/5 never consults a physician for the approximately 1/5 is referred to a neurologist or hospitalised. Acute headache medication was rarely used. Thus, avoidance of acute headache medication was rarely used. Thus, avoidance of primary chronic primary chronic headache medication may improve the management of primary chronic primary chronic headache medication consults a physician for the approximately 1/5 is referred to a neurologist or hospitalised. Acute headache medication was rarely used. Thus, avoidance of acute headache medication was rarely used.

 Migraine with Aura A subtype of migraine disorder, characterized by recurrent attacks of reversible neurological symptoms (aura) that precede or accompany the headache. Aura may include a combination of sensory disturbances, such as blurred VISION; HALLUCINATIONS; VERTIGO; NUMBNESS; and difficulty in concentrating and speaking. Aura is usually followed by features of the COMMON MIGRAINE, such as PHOTOPHOBIA; PHONOPHOBIA; and NAUSEA. (International Classification of Headache Disorders, 2nd ed. Cephalalgia 2004: suppl 1) Year introduced: 2006 (2000) 	Find related data Database: Select Find items Search details ▲
 Ophthalmoplegic Migraine Childhood-onset of recurrent headaches with an oculomotor cranial nerve palsy. Typically, ABDUCENS NERVE; OCULOMOTOR NERVE; and TROCHLEAR NERVE are involved with DIPLOPIA and BLEPHAROPTOSIS. Year introduced: 2012 	"migraine disorders" [MeSH Terms] OR migraine [Text Word]

- Bei der Suche mit MeSH-Terms findet man nur verschlagwortete Artikel und sucht damit nach Literatur in der MEDLINE-Datenbank. PubMed enhält aber auch Artikel, die nicht zur MEDLINE-Datenbank gehören oder noch nicht verschlagwortet sind.
- Wir suchen daher in den folgenden Schritten mit verschiedenen Textwortvarianten und schließen anschließend Medline-Zitate aus, um nur unverschlagwortete Artikel zu finden. Eine Textwortsuche kann man auch f
 ür den verschlagworteten Teil als Erweiterung der Suche mit MeSH-Begriffen anwenden. Dies erh
 öht in der Regel den Recall, verringert aber meist die Precision.
- Eingabe folgender Suchbegriffe in die Eingabezeile: acupunct*[tw] OR electroacupunct*[tw] OR electro-acupunct[tw] Durch die Trunkierung mit * berücksichtigen Sie variable Endungen.

- FREIBURG
- Das Feldkürzel [tw] bedeutet Textwort und sucht in den Feldern title, abstract, MeSH terms, MeSH Subheadings, Publication Types, Substance Names … nach dem Begriff als Zeichenfolge. Die Feldkürzel werden erklärt unter Help - Search Field Descriptions and Tags

- Schreiben Sie die Begriffe in eine Zeile bei gemischten AND/OR Kombinationen in einer Zeile empfiehlt sich eine Klammerung (wie in der Mathematik). Sie können die Begriffe auch in einzelnen Schritten suchen und danach in der History mittels Suchnummer kombinieren.
- Achten Sie auf eine korrekte Schreibweise (da die Begriffe als Zeichenfolge gesucht werden).
- Mit Search starten Sie die Suche.

Ergänzende Anmerkung

History

UNI FREBURG

Für eine umfassende Suche mit dem Anspruch möglichst wenig relevante Zitate zu verpassen, kombiniert man in der Regel MeSH-Begriffe und Textwörter und beschränkt die Textwortsuche nicht nur auf den nicht-verschlagworteten Teil von PubMed.

Führen Sie daher die Schritte #15 bis #19 durch. Hier werden die Textwortsuchen mit den passenden MeSH-Term-Suchen kombiniert (z.B. #5 OR #11), zusammengeführt und am Ende mit dem Schlagwort rando* eingegrenzt. Das Ergebnis umfasst dann sowohl den verschlagworteten, wie auch den nicht-verschlagworteten Teil von PubMed.
