Treatments for seizures in catamenial (menstrual-related) epilepsy

Background Catamenial (menstrual) epilepsy describes a worsening of seizures in relation to the menstrual cycle and may affect around 40% of women with epilepsy. There are specific times within the menstrual cycle when women are most at risk in the days leading up to a menstrual period and during ...

Tiagabine add-on therapy for drug-resistant focal epilepsy

Background Epilepsy is a disorder in which recurrent seizures are caused by abnormal electrical discharges from the brain. Most seizures can be controlled by a single antiepileptic drug. Unfortunately, some people require more than one antiepileptic drug to control their seizures (drug-resistant ...)

The use of standing devices for boys with Duchenne muscular dystrophy

Review question What is the effect of using standing devices in boys with Duchenne muscular dystrophy (DMD)? Background DMD is a condition that affects only boys. The progressive muscle wasting that occurs with the condition results in decreased walking ability and eventually, use of a wheelchair ...

Inhaled nitric oxide for treating pain crises in people with sickle cell disease

Review question We reviewed the evidence about the effects of inhaled nitric oxide for relieving pain crises in people with sickle cell disease. Background Sickle cell disease is a condition that affects the red blood cells. Normal red blood cells are round, but in people with sickle cell disease ...
